SHRUB ROSE PLANT NAMED 'BAIFAIRY'

Abstract of the Disclosure

A new and distinct variety of shrub rose plant is provided which abundantly forms on a continuous basis double rich red blossoms blended with pink that fade to deep pink at full maturity. The blossoms also display a slight sweet rose fragrance. The plant exhibits a compact and bushy growth habit, satiny medium green foliage that initially bears a tint of red-purple, and good tolerance to Black Spot and Powdery Mildew. The attractive medium green foliage contrasts nicely with the blossom coloration. The new variety is particularly well suited for growing as attractive ornamentation in parks and gardens.
